YOUR MOTIVATION IS AN INCREASINGLY CLEANER ENERGY LANDSCAPE, PROVIDED BY THE WIND.

MAKING SURE THAT HAPPENS IS OUR MOTIVATION.

An erected, connected and operational wind farm is the aim, but neither the end, nor the start.

You need to source material, assemble it and provide it to the customer, all of this from and to a variety of sites globally. Once operational, spare-parts need to be available for scheduled and unscheduled maintenance and repairs.

That's where we come in - by supporting you in these global flows.

Providing reliable, secure and cost-effective logistics services, whether as regular cargo (inbound, components, spare-parts, etc.) or industrial project movements (nacelles, blades and towers, etc.) for both the on, and off-shore markets, is what we have done for decades.

DHL Global Forwarding, the air & ocean division of the world's largest logistics group has taken an even more active approach, strengthening our sector efforts by setting up a global Renewable Energy team. Coordinating a network of expertise, industry knowledge and competence centres and making sure your and your customer's requirements are met.

For further information about how we can support you, please contact us at:
